

Product information and directions for use VLOCLEAR

Productname : VLOCLEAR
Purpose : Prevention of building algae and bioslime in washwater
Packing-volumes : 5-liter container

Everyone who works with photographic processes is familiar with the problems caused by the notorious algae and bioslime in the washwater. This problem is inextricably bound up with photography because an ideal feeding ground is created in the washwater for certain micro-organisms.

The developing machine should be kept clean to avoid defects and contamination of the film or paper. This means that costly man-hours are lost through extra cleaning and maintenance of the developing machine.

Adding VLOCLEAR prevents the buildup of the organisms and keeps your whole washwater spotless, including the rollers, the pumps and the filters. The washwater can even be used straight after the weekend, as long VLOCLEAR is regularly dosed.

VLOCLEAR is biodegradable.

DIRECTIONS

To keep the washwater clean, VLOCLEAR should be regularly injected into the washwater. To solve this problem SAMA Water Products has developed an user-friendly dispenser to make this easier for you.

CAUTION

Avoid skin contact and avoid getting in the eyes.

ANTIDOTES

Flush thoroughly with water. If irritation persists, see a physician.

Safety-data-sheets are available on request.
